Every generation has its great cause.

mine was starting the fight against AIDS ours is ending it

An HIV vaccine is our best hope of ending the AIDS epidemic.

Right now, there is no vaccine to prevent HIV infection. But scientists are working to find one. To succeed, they will need thousands of people from all walks of life to support HIV vaccine studies and encourage those who volunteer. You can't get HIV from a vaccine study, but you can help end the AIDS epidemic. Learn more about how you can do your part. Visit www.bethegeneration.org. Together, we can be the generation that ends the AIDS epidemic. Call 1-800-448-0440 for more information.
