

Every generation has its great cause.

**mine was starting
the fight against AIDS
ours is ending it**

An HIV vaccine is our best hope of ending the AIDS epidemic.

Right now, there is no vaccine to prevent HIV infection. But scientists are working to find one. To succeed, they will need thousands of people from all walks of life to support HIV vaccine studies and encourage those who volunteer. You can't get HIV from a vaccine study, but you can help end the AIDS epidemic. Together, we can be the generation that ends AIDS.
